

16 Station ROTATING CLAMPING SYSTEM

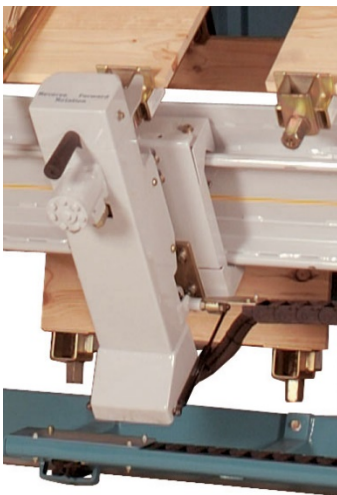

The 16 Station Rotating Clamping System is designed for high productivity incorporating heavy-duty construction, safety guarding and a simple operating system. The P.L.C. unit ensures smooth forward or reverse rotation in a single operation. The pneumatic overhead panel flattener ensures the joints are flush and against the clamps while tightening. The pressure can be adjusted to suit different gluing applications. The hydraulic clamp tightener has forward and reverse rotation with variable speed and adjustable tightening pressure for precision clamping.

STANDARD FEATURES

- 16 CLAMPING STATIONS
- HEAVY DUTY CONSTRUCTION
- P L C OPERATED
- FORWARD REVERSE ROTATION
- PNEUMATIC OVERHEAD PANEL FLATTENER
- HYDRAULIC CLAMP TIGHTENER
- GUARDING TO SIDE AND REAR OF SYSTEM
- EMERGENCY STOP BUTTON

HYDRAULIC CLAMP TIGHTENER

The Hydraulically operated clamp tightener travels the length of the system and allows the operator to quickly tighten the clamps.

The Hydraulic Clamp Tightener pressure can be adjusted to suit different clamping requirements.

When the pressure is set to the required torque the Hydraulic Clamp Tightener will tighten the clamp without over-tightening.

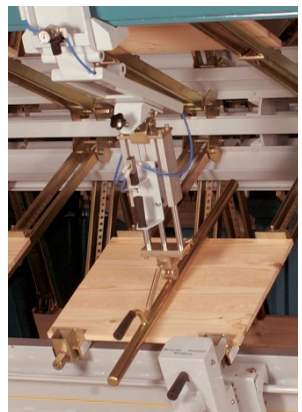

PNEUMATIC PANEL FLATTENER

The Pneumatic Panel Flattener travels the length of the system and is designed to hold the work-piece flat against the clamps while they are being tightened.

The Pneumatic Panel Flattener pressure can be adjusted to suit different clamping requirements.

The 16 Station Rotating Clamping Systems are available with working widths of 2.8 metres, 4.5 metres, 6.1 metres and 7.2 metres or we can manufacture systems to suit individual requirements.

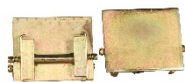

Clamps, Clamping Racks, Multi Station Rotating Clamping System, Glue Applicators and Conveyorised Glue Applicators are manufactured in Australia by an Australian owned and operated company.

PRODUCT RANGE

Conveyorised
Glue Applicators

Extender
Rocker Plates

Hold Down
Bars

Titebond®
Glues

Clamping Racks &
Glue Applicators
